All core view          Lithology                                        Age model

Key to lithology

Nannofossil marl

Nannofossil ooze

Clay and silty clay

Volcanic ash/tuff

Volcanic lapilli

Volcanic coarse ash/tuff

Basic igneous

Pillow basalts

Interbedded lithologies

Mixed lithologies

Description (Lith. unit I): Dark greenish gray, nannofossil clay, mottled and bioturbated. Nannofossil marl occurs in places and is more dominant near base of unit.

Description (Lith. unit II): Lava flow overlying volcanic ash/tuff overlying volcanic lapilli, with thin basalt layer at base.
